

Do a psycho test

The psychotechnical tests aim at establishing a certain profile (intellectual, psychological, etc.) of the person tested. They can be used to serve as a basis in the educational, academic or professional orientation of an individual.

In this sense, we can test / evaluate a pupil or a student to predict its adaptation to particular forms of education or the situation of the student with learning difficulties, to collect information that will allow a certain regulation of the process training.

There is a very wide variety of tests that can be classified according to different criteria. The most relevant classification is that based on the function. In this sense, efficiency tests are distinguished from personality tests.

By way of illustration, we can mention:

IQ tests

The purpose of this test is to reveal an individual's ability to understand the world around them, to solve problems. This test is not only related to academic ability or professional success, but also to other factors. This is why there are several types of intelligence tests, each of which is responsible for evaluating a specific type of intelligence. As a type of intelligence test we can cite logic suites and word games, domino tests, card tests, graphic suites, general culture tests, verbal comprehension tests, memory tests, etc.

Personality tests

This test determines the degree of extroversion, emotional stability, friendliness, professionalism, creativity and open-mindedness.

In the world of employment, according to these large dimensions, psychologists have been able to adapt different job profiles and create new specific tests.

- Orientation tests

This test brings out 6 main profiles of people namely: "Realistic", "Investigator", "Artistic", "Social", "Entrepreneur" and "Conventional".

This typology aims to establish in order of importance the similarities that each person studied has with respect to the 6 personality profiles. Following which, the

Psychologists can group these results with professional profiles and list the most appropriate occupations.

- Recruitment tests This test makes it possible to evaluate the competences and the personality of an individual according to 4 major axes: the individual behavior, the motivations, the relational behavior and the intellectual level.

- Professional aptitude tests These tests are of a technical and professional nature. They seek to appreciate a specific know-how, a real skill, or even your speed in a given activity.

Whether it's a typing test and / or script writing decryption, a technical test on a machine / tool for a skilled worker or technician, or a design exercise and programming for a computer scientist, it is first of all his knowledge and professional skills that are put to the test.

- General culture tests The main objective of this test is to assess the general level of culture of a candidate.

- Graphology It's a personality test that is based on writing.
